## EAGLE CREEK, OREGON

Established 1919

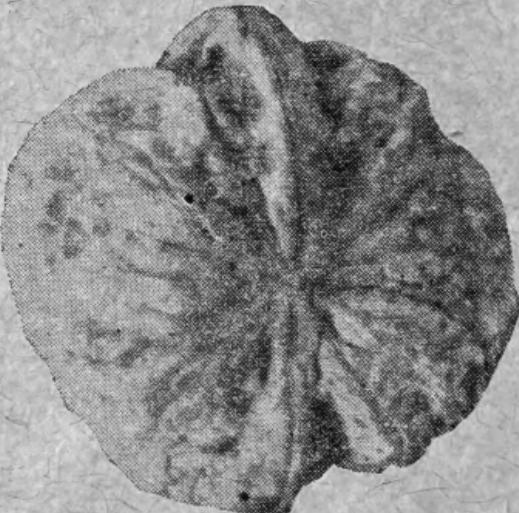

For the duration of the war we will discontinue most of our work with trees, but we have on hand this spring a few of the trees that have taken us a number of years to produce. The stock is limited. Labor is very difficult to get but we have a dependable packer who will see that orders are shipped in good shape. In the press of work there have been a number of letters which we have not been able to answer.

We hope that when the war is over we can get back to our work and carry on with more of our improved varieties of fruits and nuts.

### ENGLISH WALNUTS

#### PEKIN WALNUT.

This walnut comes from north China stock where weather is cold. It lived through a twenty below zero freeze in Idaho with little freezing back when other walnuts were killed to the ground. Trees are of good quality and bear heavily. Trees 3 to 5 feet, each \$3.00.

BRESLAU WALNUT. We have quite a few trees of this hardy variety. The nut is immense in size and the quality very fine. The tree is a good producer. The nut fills well where it has good soil and moisture. This nut originates from the northern limit of the English walnut where the climate gets cold enough to freeze lakes with a couple feet of ice.

Trees 3 to 4 feet, each \$3.50  
Trees 4 to 6 feet, each \$5.00

#### BLACK WALNUT

ELMER MYERS. This is the thinnest shelled black walnut we have been able to find. The shell is in places about as thick as the average filbert. We have found the quality good and the tree a heavy bearer.

Trees 3 to 5 feet, each \$3.00

## CHESTNUTS

The only chestnuts we offer this year are the seedling Chinese Chestnuts. These are sweet chestnuts with a nut about an inch in diameter and often larger.

The trees are resistant to the blight that kills off the American Chestnut and have been planted throughout the northern United States with good results.

Trees 2 years old, each \$ .60.

## ALMONDS

BICKFORD. This variety has proven very successful in the Willamette Valley. Good bearer, large nuts.

Trees, each \$ .60

NORTHLAND AND UTAH. These two varieties are of Combe breeding and are bred for cold weather. Have stood 29 degrees below zero. They bear well. Nuts of fine quality. Trees, each \$ 1.00.

## PERSIMMONS

HONAN RED. This Chinese persimmon is one of the early varieties. Fruit about 3 inches in diameter, deep red in color. Trees, each \$ 1.50.

SHENG. One of the earliest. Fruit about two inches in diameter. Trees, each \$ 1.50.

## FIGS

CONEY. These are a two crop fig. Fruit white and sweet. Trees one foot high or more, each \$ .75.

## GRAPES

CSABA. We have to quote this grape as we think it one of the finest for northern growers. It ripens here almost a month before the Concord. A white grape, medium size fruit, fine for eating or juice. Vines, each \$ .30.

## NUT GROWERS HANDBOOK

By Carroll D. Bush

This book is a clearly written book covering the subject of nutgrowing for the United States. It is written from a practical standpoint by a grower who has had technical training. It covers the subject from the planting of the tree through growing, harvesting, drying and marketing. Well illustrated, easy to read, 190 pages, printed on heavy book paper and bound in cloth. Price \$ 1.75.
